SKILLS

- C++, JavaScript, Python, Git, SQL, Node, React, Express, MongoDB, Next.js, GenAI, IoT, AI Agent
- Operating Systems, Cyber Security, Backend, AWS, Data Structures, OOPs, Docker, Flask., MCP

WORK EXPERIENCE

Full-Stack ML Intern: Bolt IoT

06/2025 – 07/2025

- Developed an end-to-end full-stack system using Python (Flask), REST APIs, OpenCV ML, and IoT services, enabling real-time face authentication and automated device control.
- Implemented an ML inference pipeline (LBPH) with server-side processing and API orchestration, achieving ~90%+ recognition accuracy and ~2s end-to-end response time.
- Designed a scalable event-driven architecture (ESP32-CAM → backend → cloud API → hardware), reducing manual access handling by ~80% and improving system reliability.

PROJECTS

Calcux – AI Powered E-Commerce Platform

- **Engineered an Autonomous AI Shopping Agent:** Integrated **Vercel AI SDK** with a custom **Sanity MCP Server** to build an agentic assistant capable of live schema lookups, real-time product discovery, and automated order tracking through natural language tool-calling.
- **Architected a Headless CMS Backend:** Designed scalable, structured content schemas in **Sanity CMS** and integrated **Clerk** for secure user authentication, enabling high-performance data fetching and frictionless customer identity management.
- **Developed a Premium Storefront:** Built a responsive, accessible UI using **Next.js 15**, **Shadcn UI**, and **Tailwind CSS**, featuring a secure **RazorPay** payment pipeline with automated inventory reconciliation via server-side webhooks.

GetMeBread - A crowdfunding platform for creators to fund their projects (MERN)

- Engineered a scalable crowdfunding platform using **Next.js (App Router)** and **MongoDB**, leveraging **Server Actions** to optimize data fetching latency and an automated **Nodemailer** service.
- Implemented **Razorpay API** to facilitate secure financial transactions with automated order verification, coupled with **NextAuth.js** for robust OAuth authentication (Google/GitHub).
- Designed a responsive, glass-morphism interface using **Tailwind CSS** that features dynamic routing for creator portfolios and a real-time dashboard using **Cloudinary's REST API** to asynchronously upload and retrieve optimized URLs for user profile pictures and banners, ensuring fast load times.

Soundify – Web Music Player

- Built a web music player using HTML, CSS, and JavaScript, supporting dynamic album.
- Implemented client-side state management, async data fetching, seek bar controls, volume control, keyboard shortcuts, and responsive UI behavior, handling 100+ song interactions per session during testing.

CERTIFICATIONS

- **Cyber Security Expert** – Gyan Setu
- **IoT and Machine Learning** – Bolt IoT
- **Data Analytics** – Teachnook
- **Generative AI Fundamentals** – Databricks

EDUCATION

Jaypee Institute of Information Technology || Noida, Uttar Pradesh

2022 – 2026

BTech. Electronics and Communication Engineering

Relevant Coursework: Data Structures and Algorithms, Operating Systems, Machine Learning, IoT Software Engineering, Object-Oriented Programming, Embedded Systems
